

The Technique Ladder

Prompt Engineering Foundations

Corrected repository edition

Verification model: gpt-4.1-mini-2025-04-14

API temperature: 0.2

Evidence boundary: the original ChatGPT submission files are preserved under submission/original/. This corrected edition presents the active numerical-temperature API verification and does not relabel historical ChatGPT transcripts as API outputs.

Result

Role + constraints 15/15; structured reasoning 14/15; zero-shot 13/15; few-shot 12/15.

Boundary test

Structured reasoning outperformed the winning technique in the healthcare safety variant because the fixed commerce schema omitted a clinical-safety escalation.

API verification

Primary role/structured and healthcare role/structured comparisons were rerun three times each using gpt-4.1-mini-2025-04-14 at temperature 0.2. Twelve unedited JSON records are retained in verification/api-runs/.
